SPICE model of thermoelectric elements including thermal effects Abstract: An electrical model for a Peltier cell, based on the analogy between thermal and electrical variables, is proposed. The use of thermal models allows the global performance of thermocooling circuit and signal system to be checked by using electrical circuit analysis programs such as SPICE.

Interestingly, SPICE electrical equivalent models , , , can give a simple description of dynamic and static behaviour of thermoelectric system, with a good agreement with experiments, although these models use temperature independent properties.

Temperature dependent iterative model of thermoelectric ...

A SPICE-compatible model is especially useful when dealing with a non-linear devices such as a TEC and incorporating it in a closed-loop system. In such cases a SPICE-compatible model can help in obtaining the transfer functions needed to design feedback circuitry.
